What Neil said, with the addition that  
a) you may not ship wmp.dll by itself  
b) doing that would horribly break systems

This is a horrendous idea so far. Please look up "redistributing windows media player" on MSDN , which should answer your questions as regards how to redistribute Windows Media Player if needed.

Please do not ship WMP.dll by itself. That is a horrendous idea, and I'm still cleaning up crashed user systems from the last company that was egregiously irresponsible enough to try something like that.

Hi  
I need to isolate the WMP11 plugin for the browser (ie7) and install this on several machines. I beleive the dll is wmp.dll and this exists for all workstations on our network. I think I just need the relavent registry keys and subkeys to implement in a script. i would like to globally enable this for all users. Does anyone have the keys that are relavent to this request?  
Regards  
Craig Judd
