As regards getting only background sound, is there a karaoke setting on your sound card accidentally turned on... ?

What DVD filters are listed under WMP's Help>About:Technical Support Information menu tool?

---  
Speaking for myself only.

See <http://zachd.com/pss/pss.html> for some helpful WMP info.

hI, I am having the same problem sort of on VLC. I am able to play the movie

but only get the background sound, no dialogues nothing just the background

music. Now, if I try to play it on Media Player 11 it doesn't even play...

I

get this error :>>> Windows Media Player cannot play DVD video. You might need to adjust your Windows display settings. Open display settings in Control Panel, and then try lowering your screen resolution and color quality

settings.

I am close to desperate now, tried everything I could think of and nothing!!! Soo frustating!

Do you have any suggestions for VLC ?
