I don't know enough about this specific issue to know why you can burn Audio CDs onto CD-RWs but not Audio CDs to CD-Rs. The fact that CD-RWs work but CD-Rs don't is beyond my small sphere of knowledge in this arena, sorry. On the plus side, it looks like you have a path forward here....

Can other burning apps burn CD-Rs correctly on your system?

--

Speaking for myself only.

See <http://zachd.com/pss/pss.html> for some helpful WMP info.

Thank you for the reply.

WMP goes through all the motions you'd expect (sees the disk, analyze, write, finalize, etc). The disk is ejected by WMP.

I reinsert the disk, the computer treats it like a blank disk, but now wants to format it. The disk is ruined; that is I cannot use it in a machine I know is good.

One other note, I have discovered I can burn an audio cd onto a CD-RW. It plays fine in the suspect computer as well as others. This led me to believe

I had a bad stack of CD-R's, however, I was able to burn an audio cd on one of the suspect cd's on the good machine with no issues.

I have deleted the UpperFilters and LowerFilters in the registry, as suggested in KB929461; no better.

The media is Memorex CD-R, less than 1 year old, stored well (KB929460).

Re: Won't burn audio

Thank you for your time.
