So what does show up under the Pictures node in the player?

Step 3 below sounds like a horrible plan that would have temporarily destroyed the ability of the player to recognize types: I don't know if the player is able to repair that damage. Please never do that. =(

Speaking for myself only.

See <http://zachd.com/pss/pss.html> for some helpful WMP info.

Hello,

Problem: cannot add my pictures(.jpg) to WMP.

Trouble Shooting Done:

1. uninstalled and reinstall WMP. uninstalling each component in Control panel.
2. renamed Current Database
3. Stopped Media player service, rename HKLM reg key, started service.
4. Tried moving pictures to a different location on HDD. and Manually added that folder to the Monitor folders.
5. Copied pictures to a different PC with WMP and the pictures are added on that PC.

After that picture still not being added.

i've been trolling the internet for 4 days looking for an answer.

If i click "apply media changes". I don't see WMP scanning "My Pictures"

folder.

Videos, Music files are ok. Its like WMP doesn't recongize jpg files.

This is not a big deal, but it drives me nuts when something doesn't work the way it should.
