You should create a Display Area UI plug-in. You should embed the Web browser control in your plug-in's window. You can navigate the browser in response to the Player's playback events.

If you're not already, I strongly recommend that you become familiar with the Web browser control's security interfaces and their proper usage.
http://msdn.microsoft.com/workshop/security/szone/reference/urlzones_ref_entry.asp

Hope that helps,

—

Ok, so I'll change the question: How can I build a WMP plug-in to display a web page inside WMP visualization area, changing the URL according to current media ?

There's no malicious intention, I'm developing a WMP plugin to a Lyrics site, and we want to show music lyrics inside the WMP. It was made with WinAmp and worked fine. I just want do the same with WMP.

I started using a viz because I read anywhere on SDK docs that it's the way to display web pages. At least I

Re: Can I display a HTML Page inside Visualization panel ?

understand like that.

Could you send me any tip ?

Thanks a lot for your attention Jim.
