I tried to use the posted sample for writing the lyrics as a model for writing the pictures, but neither one of them worked. The code for retrieving the images and saving them to disk works fine though. I have tried using the AddAttribute method of the IWMHeaderInfo3 object to add pictures, but I keep getting this exception: Exception from HRESULT: 0xC00D0BBC.

I need assistance with adding new images and editing existing images in WMA files. I have found a thread that I was able to use in iterating through the images already in a file, but the code for adding a new image didn't work. Here is the link to the thread I found:

http://groups.google.com/group/microsoft.public.windowsmedia.sdk/browse_thread/thread/7ba838387

I need to be able to edit/add/delete images inside of a WMA file. I need to know how to do this in C#. Thanks.

I never posted any C# code to write "WM/Picture" attributes so I can't imagine how something that doesn't exist can fail to work other than in a metaphysica way.

Have you tried to use the VB.NET code to write "WM/Lyrics_Synchronised" attributes and the C# or VB.NET code to read "WM/Picture" ones as a guideline to write your own C# code to write "WM/Picture" attributes?

Or you mean none of the 3 samples work?
