You could use WMI:

<http://bloggerdigest.blogspot.com/2007/01/wmi-scripts-terminate-windows-program.html>

I didn't see any function in either WMEncoder or WMEncoderApp which can close a WMEncoder application. Set WMEncoderApp.Visible=false can only make the application not show, but the processes WMEncAgt.exe and wmenc.exe are still running.

Is there a way to exit a WMEncoder application programmatically? Thanks!

Helen
