Hi all,

during bootup of the windows server 2003 only the WM-HTTP-Controlprotocol Plugin does not start automatically, get the above error message.

But I can start (means activate) it manually after the bootup.

What does that message mean? Which address is not valid? I changes also the port for WMS-HTTP from default 80 to 8000 or other else, but same situation.

Winsock error, as indicated by any number of posts in google groups :
