Hello.I need your help. I have a txt file and i want to import it in the allow list of wms(the ips that they are inside). How to do this?

One way is to find the file

that the IPs are saving from the plugin and copy paste the IPs there.But where is this file? If this is not possible please suggest an other way.

thank you

PS i reposted it and i tried to correct some bad english :D

.
