I have a Compaq iPAQ pa-2 mp3 player that I got about 2-3 years ago. The software that comes with it has either musicmatch jukebox or windows media as the programs to install and use to transfer the songs to the device. The musicmatch jukebox is acting weird so I figured I'd try windows media player. The version it says it is installing Windows Media Player Version 7.0. I try installing that...It tells me that I can't get that on my computer (which is a Windows XP). I am just wondering how I can get my songs onto my mp3 player.
