Thank you, that fixed a problem I have been having for a month now. I had given up until I saw this post.

That fixed it. Thank you for your help.

Does this fix itself if you turn WMP's EQ off?

--

(speaking for myself and doing this in my free time)

See <http://zachd.com/pss/pss.html> for some helpful WMP info.

For a long time, I have stopped using WM-10. It's just distorted. I didn't have that problem with Real Player or Music Match. It sounds

like

a tiny radio sounds when your turn it up all the way. Fuzzy instead of sharp and clear. This happens on not only MP3's but WAV files. Any

ideas?
