Two part message:

Request for help section:

In MP11, I am seeing duplicate entries of songs in my music library. This is happening on only some of the songs in the library. I think these are songs that may have been loaded to an mp3 player (just prior to me giving up completely on that technology!). How can I get MP11 to remove these duplicates? Can I reset the library somehow to start the scan of my My Music folder from scratch? Will this corrupt any tags that I have built myself?

Complaining about the product section:

In short, I find MP11 to be a very difficult product. The interface is not intuitive. Managing playlists is much more difficult than MP10 for me. Now I have all of these duplicate entries that I need to remove.
