What audio codec does the file use?

What version of the player are you using on what exact version of Windows?

--

Speaking for myself only.

See <http://zachd.com/pss/pss.html> for some helpful WMP info.

Hi

I have an .avi files that has no sound in WMP. Do I need to d/l a new plugin?

The file has no sound in real player either, and real player tells me that "The file contains an unsupported file format, the needed codec is not installed on your system". The video works fine in Real player and wmp.

How do I find out what I need to have sound in that file?

Thanks a lot

Patrick
