In our applicaiton we are bringing up Office 2007 in a document container where we disable some buttons from the "standard" toolbar and automate those functions through our framework but with Office 2007 when we show the view the new "Office Button" isn't visible for some reason. This is where most of the functions from the standard toolbar were moved for Office 2007. Does anyone know how to enable this new "button"?

Any help/suggestions would be appreciated
