- 

in A column i have many records as string like

(A)  
one  
two  
three  
four five  
ten  
ten nine  
nine  
.....  
.....  
.....  
etc

with vba i would find all the SUM string that have at least "x" characters including spaces between the strings, for example if i would like to find the sum string with "8" characters at least, I'll get in column B those SUM strings like follow

(B)  
one nine  
two nine  
ten nine

where all the found strings have 8 characters

thanks a lot for your support

.
