I am trying to bring up the PowerPoint Options dialog in our application but for some reason this doesn't seem to work. It does however work basically the same way for both Word and Excel. Does anyone know if this is supported for PowerPoint? The problem seems to be at the call to `pApp->GetDialogs()`; which is throwing an exception of `E_NOINTERFACE`.

```
PowerPoint::_PresentationPtr pDoc =  
(PowerPoint::_PresentationPtr)pCurrentDoc->GetDocPtr();  
PowerPoint::_ApplicationPtr pApp = pDoc->GetApplication();  
PowerPoint::PPDialogsPtr dlgs = pApp->GetDialogs();  
PowerPoint::PPDialogPtr dlg = dlgs->Item(PowerPoint::ppDialogStandard);
```
