Hello Everybody,

I desperately need material in form of books or tutorial to learn how to develop a plugin for Outlook 2003 and 2007 using C#. My environment is Windows XP with Office 2003 and VSTO 2005 and I am using Visual Studio professional 2003. My plugin should add buttons, folders, connect to a database, create forms, do some processing with fields in those forms, add icon, images and display/save reports.

Thank you for your help.
