Hi Bob,

Your users can choose another folder via Tools|Addins and clicking on the 'Browse' button.

Cheers

Hi Everyone:

As you may know, when you create an Add-in in excel, it needs to go into the office\library directory. However, since this location is usually not available to most users on a network due to security reasons (they cannot write to it, they can only read), the .XLA file may not be written there. How can an add-in that is placed in the local directory be read from excel. Thanks for your help.

Bob
