I'm very perplexed.....

Have HP DJ610C printer installed. Printing test pages is not a problem and indicates a functioning and communicating device.

I can print pages off the internet – I've just printed the general discussion page for Office.

What I can't do is print from Office applications – OE, Notepad, Word, Excel. When I say can't print, it sounds as though it's printing but NOTHING appears on the paper. Internet and test page printing is OK.

I assumed that something was wrong with Office i.e. file corruption, so I ran the Repair function. No Joy!?! I then removed and re-installed Office. No Joy !!!????!! Can anyone tell me where I go from here ?????
