Glad you have it back.

How about, File, Open, Outlook Data File?

Howard Brazee wrote:

I was looking for settings and clicked clear off-line and apparently created C:\Documents and Settings\brazee\Local Settings\Application Data\Microsoft\Outlook\archive.pst

but I can't import it. How do I get back my calendar?

I tried that - I was afraid to exit Outlook with my calendar missing, and couldn't copy the .pst file because it was in use. So finally I crossed my fingers and exited. When I came back in, all my data were there (from Exchange???). I have no idea what happened when I told it to clear off-line.
