When inserting an image in excel I cant seem to find how to make the background of the image transparent, I have my signature as a bmp file, and in my office XP 2002 excel when I insert the signature I can call up a picture tool bar that will make the background transparent so my signature fits on a line and not block contents in neighboring cells. Hope I explained that correctly.

I cannot seem to get that effect in 2007 beta, and searched through all the picture formats and cant seem to find any transparent option. not even in the help file.

Any ideas and if it is actually missing how can I send that to MS for it to be added back

thanks

Bill
