Having checked Patrick's site etc, all I can say to everyone is read what Patrick has said and you'll resolve the issue regarding none opening files etc. Keep up the good work Patrick I've now registered to receive your updates as and when

Hi, this is Lincoln and I am having a similar problem that seems to be a result of the anti-virus program (Norton 2006 Anti-Virus) on my computer being incompatible with the technical refresh version of the Beta. If you look at the error message that pops up and go to the Microsoft Knowledge Base article 835404 it gives instructions on how to disable the Norton plug-in, but for earlier versions of Office. I can't seem to find a way within Office 2007 Beta to simply disable the automatic virus scan.

If anyone knows how to disable the automatic virus scan from within Office, please let me know.

Hi Lee
Thanks for the help it looks like I will just have to delete it all.
Cheers,

If you look in 'Add/Remove Programs' and click Show Updates, the Beta 2 TR is listed as an update but it cannot be removed. The only way you would be able to do it is to remove Office 2007 (everything) and then
