I have a client who wants me to setup a network of 3 PC. I have no problem networking the PCs enabling file sharing etc – my only concern is that my client wishes all the PCs to be able to work on the same documents at the same time. To be clear she wants all users to be able to update word, excel (& Filemaker Pro) documents that are open on all 3 PCs simultaneously so that if user 1 changes a document the change is immediately applied to the document being viewed by users 2 & 3. Is this possible at all? If so, please provide some guidance.
