It's a Windows display setting. Did you try there?

I have Office XP version 2002 (Word, Excel, Powerpoint, Access).
Unfortunately, whenever I open any of these programs, the background color of the page, whether it be Word or Excel, etc. is a gray color. For instance, in Excel, I cannot even shade a cell, sheet, etc. a different color. First off, the background color should be white. I cannot seem to change this. Any suggestions?
