Since office 97 is not a valid Office 2007 upgrade path, is it neccessary to uninstall Office 97 first, as opposed to allowing Office 2007 to uninstall it (if it does)

Office 2007 will open all previous versions of office files just fine.

After furious head scratching, Marianne asked:

| I have been using Office 97 Pro and recently purchased Office 2007
| Pro. I haven't installed it yet. I am using the XP operating
| system. Every now and then Word 97 will freeze up and MS suggests
| upgrading, since 97 is no longer supported. It doesn't happen that
| often and I can live with it. I am wondering if my Office 97
| documents will open in the new version Office 2007. I have read some
| of the comments here about the differences and think I should just
| leave well enough alone and not install 2007. Especially, if my old
| documents will be useless. I also have some Office 2000 documents.
| Thanks for any assistance.
