OK I did some more systematic testing.

The documents are definitively all made with Word for Mac.

Docs made with Word for Mac 5 convert fine in WD2000, 2003 and 2007.

Docs made with Word for Mac 3 do not !! But it may still be a problem caused by the old mac data/resource forks being corrupted so I'll try with Word 95/97 and Word for Mac 2008 first. But I have doubts as Mac Word 98 only could (I think) convert Mac v 5 docs and newer.

Looks like there is no support for Mac v 3 in any Word for Win version (Mac v 4 corresponds to Win v 1, which may explain this). very frustrating in that case.

I'll dig on.

/S

PS To forestall any comment on the 'old docs' topic: Yes many of the docs can be thrashed, but a couple cannot.
