After searching microsoft's website and doing what they suggested, we still get the following message: Office program has not been installed for the current user. Please run setup to install the application. This happens when we try to launch excel, word, etc.

This occurred when the user tried to install a different version of Outlook on their pc.

Any suggestions what is causing this and how to cure it. We tried re-installing, removing, changing permissions (the user had admin priveldges)

Getting close to re-formatting the drive.

Thanks!

DH
