I am using Windows XP Pro SP1 with Office 2000 and IE6.0. Yesterday I went to office.microsoft.com to see if I needed any critical update. There are 8 listed. I can only download one at a time. I downloaded Office SR1a first. The next 7 are listed below and I need to know if I actually need them and if so is there anything I need to do before install of each item? I have SP1 and some of the updates are for SP3. If I update to SP3, won't this interfere with the SP1 that I now have?

Updates needed for my computer are:

1. Office SP3 English version
2. Office Security Patch KB822035
3. Office Security Patch KB830347
4. Excel Security Patch KB830349
5. Outlook 2000 Update of 12/8/02
6. Office 2000 Wordperfect 5.x converter security patch (I don't even use Wordperfect and am not even sure it is on my computer)
7. Access 2000 Snapshot viewer security patch KB826292

I have read many posts and people seem to be having problems since installing SP3. Any help is welcome.
