I am having a lot of problems with my system. I have Windows '98 with Office XP. I am told that I need to uninstall Outlook and reinstall it, but it is a package deal and not separate. I try to do updates and can't. The message I get is that the .MSP files are missong and those are needed for updates. I have had the Office for about a year and every time I update, it tells me I can't.

Outlook is removing files when I tell it not to and there is nothing in the archive or backup or .pst files.

.
