The title of my thread question is "long standing problem with error 0x80070643" I presumed that a reader of the question would therefore have the specific reference. Clearly I should have put that in the body of the question text. To reiterate, the same error message appears with all failure records for office updates only (other updates appear to work with no problem). To avoid any further confusion the failure error is 0x80070643.
