Answered in another newsgroup. It is poor netiquette to multipost (which means to post the same message separately, repeatedly, redundantly, and incessantly to several different newsgroups). Please do not multipost.

thirumalairajan wrote:

Dear friends,

I am having the Windows 2003 Server OS. When I run the Office 2000 setup, I am getting the following error message.

"Some default settings in Microsoft Office 2000 Setup do not work properly on a Windows Terminal Server. To install office on Terminal Server, you must use the instructions and tools available in your Office 2000 Resource Kit or at <http://www.microsoft.com/Office/ORK>.

[How to resolve this error, and to install the Office 2000 setup?](#)

Regards,

Thirumalairajan.
