After furious head scratching, hsd3hms asked:

| I just got a new MacBook 2 GHz Intel Core Duo running OSX 10.4.8. I
| regret ever getting it! It is so slow!!! My tech person at work says
| it is Microsoft that is slowing this machine down. Tells me there
| isnâ€"t much we can do. UGH! I was told this by another Tech: The
| software you are using is not made for the Intell processor and so it
| is running under emulation using the built−in Rosetta utility.
| Software that is compiled to run on the Intell processor will be
| light−years faster.
|
| Some of the software manufacturers haven't yet re−coded their
| products for the new Macintosh platforms.....many more have. When
| will Office be updated for the new Mac? Hurry Please!
