Hi, I tried this method and in the registry, it still won't let me
uninstall
Microsoft Office 2007. It gives me a message "Windows Installer -
preparing
to remove" but then an error "this patch package could not be removed..."
Help, I am getting nowhere fast. Cindy

Hi, Dan,

See if this helps:

Manually removing the Office 2007 Beta

I was running Office 2003 and decided to try the 2007 Beta. I installed and ran successfully, but when the beta was up I uninstalled and 2003 would no longer work. I tried to re-install twice and both times the installation of 2003 failed. So I checked Add/Remove and there is an instance of 2007 Beta Pro but when I click uninstall it tells me that my computer does my computer does not support the package language. I tried to download and install the 2007 Trial, but it won't install because it sees another instance(that I can't remove) and won't install.
