Convert your sound file to WAV and then reinsert it after setting the size limit to 50000KB in Tools > Options > General. I don't know what the current file type is of your sound file, but you can't just rename it. Let us know the file type and you'll get suggestions for the conversion.

> *Sonia- thanks and you're right. I did that but my client wants to have the presentation (pps version) to be able to email it to clients with the song playing. The only way I could do that was to put both on the desktop and ask the receiver to transfer the files to their desktop and play from there. It worked but the client doesn't like asking for the transfer to the desktop so now I've been trying to embed a .wav in the presentation. Frustrating!*
