Is there some code I could use to change the way it names the files? The reason is that after they are created, I need to retrieve them in order. The simplest way to do this would be to sort them alphabetically, but that won't work because if there were 10 or more slides, slide10 would sort before slide2. It would be better if the program left-padded the numbers with zeros but obviously it doesn't.

Also, the folder it creates is not named after the presentation, but after the file name that is provided to the SaveAs function. So if I tell it to use filename test.jpg, it actually creates a folder called test and puts the jpg files there.
