

mpegs in PP2000

Hi there,

I'm using PP2000, and I have several mpegs loaded as Movie Files into slides (rather than embedded as objects). I'm developing a presentation that can be burned to a CD and sent to customers, so it can't rely on any particular setup on the computer. Originally, I had PP on the system, and all the mpegs ran in their slide. THEN, I pulled PP off, and none of them ran. I converted them to AVIs using the Microsoft Video One codec, and now.... the first AVI runs, and each additional movie just flashes the first frame on the screen, then goes to the next slide. Help! Is this because I'm using PP2000 -- would PPXP solve it? Apparently it's not because I'm short on video resources, because otherwise it would just mess up every movie's redraw. Is this a case where I just need to change to a different presentation package?

Thanks!
