My boss is having me create a powerpoint presentation that includes one slide with a cluster of jpgs.

I have tried everything in the help files and am unable to get the images (as a group or individually) in any of the animation areas so I can control when and how those jpgs appear.

My boss has seen images carefully controlled and wants that. Right now the images are appearing before any text—completely the reverse of what he wants. He wants the first two bulleted items to appear, then the jpgs, and finally the last bulleted item.

I am using PowerPoint 2003.

Can anyone please help me with this?
