Martin – I have been trying all morning to install templates that are being requested when I try to create a slide from the Auto Content Wizard. When I open the Company Meeting I get:

"Can't display the template used in this doc. This feature is not currently installed. Would you like to install it now?"

Yes

"Installing Template" – won't complete

"The feature you are trying to use is on a CD-Rom or other removable disk that is not available. Insert Microsoft Office XP disk and click OK"

"The past cannot be found try to find STEDU.MSI in a folder."

I tried all three of my disks. I found STEDU.MSI (which was requested) but it still wouldn't install.

I am soooo frustrated. I am taking an online Microsoft PowerPoint class and I have wasted several days on this problem.

Did you ever find a solution???
