Its not clear if you want the whole slide to have this effect, or just a text box on the slide, but one quick idea is to use Microsoft Movie Maker (free from MS website if you have Win XP) to create a title video clip – under "2. Edit Movie", on use the "Make title and credits" option, and then apply "Film Age – Older" to the clip. You can insert the resulting clip onto the slide, and/or re-size it to cover the whole slide, depending upon the desired result.

While this process will work and the results look good, albeit you have to delve into Movie Maker to get them, it might be tedious if you want to make lots of these title/dialog clips.

I don't think any existing PowerPoint animation effect will get even a similar result.

Best of luck.
