Are you sure you embedded the wav file? Under normal circumstances It should have played on other PC's. Wav files are the only files that can be embedded. All other files are linked, and should accompany the presentation when moved to other computers

I want to distribute a presentation as a pps file, but the attached sound will only play on my PC, when I play the presentation on another PC, it comes out with no sound. I have embedded a wav file and I tried it first with an mp3 file, but still, no sound in other PC's. What am I doing wrong?
