Thanks for that code, It doesn't seem to work, though. The mouse action does not get assigned to the pictures at run time.

I assigned your DoSomethingToAllThePictures() procedure to a mouse click action for a picture in the first slide. That is, the picture assignment at run time should occur to all pictures from number 2 to number of slides. I also want to randomize the show order of those slides and that works ok with another routine triggered in the first slide mouseclick but the call to your code does not work.

I even tried diferent ways to call the sub like

..Run = thesub (with no quotes) or thesub().

.
