Here is a link on how to do what I mentioned and forgot to add to the above post.

| I don't think that you can do that. What I have read on snapshot files  
| (which is not much) is that you have to also provide a link to the  
| snapshot  
| viewer. You could put your snapshot file into MSWord. Then, cut it in  
| Word,  
| and paste it as a WMF file into PowerPoint.

|| The snapshot is a snapshot file created from a Access report and the way

I

|| was trying to insert it in PowerPoint was by choosing Insert - object -

| From

|| file, but then I only get the Icon
