If you have PowerPoint 2002 or 2003, you could use PowerPoint's photoalbum functionality: Insert – Image – New Photo Album.

Best regards,
Ute

Hello!

I wondered whether there is a possibility to position several graphics on different slides in Powerpoint by a script or something like that.

Let us assume we got 50 slides. On each of these slides we want to include a graphic (e.g. jpg file) on the exact same position. In addition, these graphics have not the correct size, so that we must change the width and height of the pictures.

Doing this by hand, is a long-lasting activity :-)

So, does anyone know a trick how I can do this more sophisticated?

Best regards,
thomas
