So the MP3s have been converted to RIFF WAVs using Cdex so they could be embedded, is that what you're saying?

If so, you want to try inserting the regular MP3s instead.

<http://www.echosvoice.com/gotchas.htm#SoundAdvice> will help you keep the MP3 links working.

Because of the size of the completed presentation I had to find a way to install MP3 music files on – I used Cdex to do this. So ... the music are converted MP3 files and the animations (sound of sweeping, sound of a truck back-firing) are wav files

"Echo S" wrote:

PPT can play animation sounds along with background sounds. It may be that your sound card can't play two WAV files simultaneously, though.

Is your background music MP3s or WAVs?

Re: How do I get two wav files to play sound at the same time?

Re: How do I get two wav files to play sound at the same time?

I have inserted various music files to play as a background to my slides
and
converted them so that they are playing correctly and are not too big.

I
then want to have animations with sounds playing concurrently, but the music stops as soon as the new sound starts. Any assistance please?
