How do I create a PPT template for a corporate client that can be used to change content that is cut and pasted from their existing PPT presentations. My slides have been approved but my client has many sales presentations that have content they want to move into my new designs. No matter what I send them, the text formating that in my new slide templates does not does not effect the older content.

What do I need to do? I am using PowerPoint 04 in Mac OSX.

.
