Dear friends,

I use a database (ms-access) in order to copy some files (some of them are videos, other are mp3s, other are images) into folder C:\SelectedFiles.

- a) How Can I use Powerpoint to show all those files?
- b) is it possible to show two or three files together, e.g. one photo and nearby the text?
- c) Can I define (using my database) the date and time to start and end the presentation?

Thanking you in advance.

GeorgeCY
