Derek,

I'm trying to make the deal or no deal game with 16 cases for my church youth groups upcoming activity in September. Did you ever get the boxes to disappear randomly and stay off the screen? If so could you tell me how you did it?

I am creating a Deal or No Deal presentation. I have used the trigger options of PowerPoint 2003 to get one object to disappear when another object is clicked. Is there a way to randomize which object disappears or do I have to change each link?
