I'm having the exact same problem... now you see 'em, now you don't... If I go remove the mailbox and then add it again, the calendars reappear. But they will then disappear again with no noticeable pattern.

I'm running Exchange 2003 and the clients are a mix of Outlook XP and Outlook 2003. The client with the disappearing calendars is using Outlook 2003.

It took months to get this office to actually use shared calendars. I need a fix VERY soon please!
