Yes, this is probably true. You would have to ask the mail server administrator about any limit.

You might want to consider using a mail merge to create an individual message for each member. That gives it a better chance of getting through the member's anti-spam system, too.

> We are trying to send out a mass email to our 400 plus members, and this
error message has been popping up. We have sent out these before, possibly
to 350 members, and it's worked fine. Someone told me that our "e-mail
server probably (I will give this a 95% confidence) has a hard limit to the
number of e-mail recipients you can have for a single e-mail. The easy fix
is to split the list into smaller chunks and send the same e-mail to each
one. Your IT staff "should" be able to change/remove that limit but if they
know how, they probably wouldn't anyway. It's an anti-spamming measure."
Is this true? How can we find out what are limit is, or can we change that
limit? (We tried chunking it into thirds, but received the same message.)
