Hi, I guess because I am not familiar enough with OL.

I am also in need to sync with my cell phone and I only want the personal contacts and a few business contacts in the sync. I do not think that sync software would recognize the categories and download only the "cell phone" categories—I think ( I am not sure) that the WHOLE folder would get sync'ed and that would create a problem for me.

I am completely open to suggestions and appreciate them....

The link idea you have seems that it would do what I want. Can u tell me how to implement in more details—step by step? (I am new at this level of use for OL—beyond the basics.)

Thanks!

S
